

# 10 Warning Signs of Primary Immunodeficiency

Primary Immunodeficiency (PI) causes children and adults to have infections that come back frequently or are unusually hard to cure. 1:500 persons are affected by one of the known Primary Immunodeficiencies. If you or someone you know is affected by two or more of the following Warning Signs, speak to a physician about the possible presence of an underlying Primary Immunodeficiency.

**1** Four or more new ear infections within one year.

**2** Two or more serious sinus infections within one year.

**3** Two or more months on antibiotics with little effect.

**4** Two or more pneumonias within one year.

**5** Failure of an infant to gain weight or grow normally.

**6** Recurrent, deep skin or organ abscesses.

**7** Persistent thrush in mouth or fungal infection on skin.

**8** Need for intravenous antibiotics to clear infections.

**9** Two or more deep-seated infections including septicemia.

**10** A family history of PI.
